Internship at Recorded Future
Winter 2023

This winter, I took an off-term in Palo Alto to intern as a data scientist at Recorded Future, the world's leading cybersecurity intelligence firm. There, I wrote Python scripts to ingest and process the data coming into the company's main product, its security intelligence graph. I also learned Git, MongoDB, and a healthy amount of respect for the complexity of data science projects. Finally, I got lots of practice working from and adding to an established codebase, experiencing the importance of clean and detailed documentation firsthand. I'm incredibly grateful for the generosity of the Byrne family for making this experience possible.
